Jackson Jet Center located in Boise, ID (KBOI) provides a full service facility with a contemporary interior design. The conference room’s picture window provides a portal for the historic war aircraft on display for pilots and passengers. The 20+ foot bronze tree installed in the lobby was designed and commissioned by a local artist as a tribute to the beauty of the outdoors you’ll enjoy when arriving in Idaho.

World of Air Elite Magazine is quarterly publication from Air Elite and World Fuel Services. Enquiries about the publication can be sent to info@airelitenetwork.com or 3000 Bayport Drive, Suite 470 Tampa, FL 33607.
Welcome to the inaugural issue of A World of Air Elite.

This magazine was launched to share the latest information on Air Elite with you and your customers. It features relevant information to enlighten, inform, and engage discerning flight crews and passengers around the world.

As you know, our industry has evolved a lot in the last few years. More recently, it has become defined by massive FBO brand mergers and broad purchases by large chains.

One thing that hasn’t changed? FBOs that provide superior safety and service always win. Air Elite FBOs have chosen to maintain independent operations and solidify customer relationships through the power of premier service and facilities. As a result, the Air Elite Network continues to grow. We want to continue that momentum – now and into the future.

We commit to support you with the right solutions to provide you an unparalleled service experience. Through fuel supply, AVCARD retail charge cards, contract fuel, trip support, and FlyBuys™ Rewards, we offer a constellation of quality products and services, delivered with value and reliability you can trust.

I am excited about what’s to come. Our goal is to maintain and strengthen our position in the business and general aviation space – right next to you.

John Rau
Executive Vice President, Aviation & Marine
World Fuel Services
A Bright Future Ahead

It is my pleasure to welcome you to the inaugural edition of our new magazine - A World of Air Elite. With the continued growth of the Air Elite Network of Diamond Service FBOs, we are excited to create this publication for all of you - our professional flight crews and aircraft owners! We are very grateful for your continued support.

Currently, I work as Sales and Marketing Director for Harrods Aviation in London (Luton and Stansted airports). Through my relationships and interactions with the network members, my passion for the Air Elite Network has been ignited. As a result, since 2014, I have had the privilege of serving as the Chairman of the Air Elite Board. During my time with Air Elite I have seen many firsts for our network the first South American, Mexican, African and Chinese FBOs to join the network, and the first loyalty program to promote and support our diamond service FBOs (Diamond Dividends). I have also seen the first service designation network to reach 60+ members with independent operators and the first customised concierge software designed specifically to support a network of service-oriented FBOs that place the importance of service above all else. Air Elite is the first network to elevate the loyalty rewards offered to pilots and flight operators for their fine judgment in choosing to visit FBOs within our network, in combination with their utilisation of World Fuel Services' AVCARD or World Fuel Services' Contract Fuel. What's most exciting is what we have yet to accomplish!

With the creation of this global network of uniquely exceptional FBOs back in 2011, President of one of the founding FBOs, Tim Ward of Alliance Aviation Services in Fort Worth, Texas (KAFW), stated 'We believe strongly that flight departments desire a combination of great service and superior facilities. This basic premise still drives the design and direction of the network today. The collaborative foundation of this network combines the expertise and resources of World Fuel Services with the collective commitment of the world's best FBO locations and operators.' From the network's leadership to each network FBO's personnel, from the top to bottom, this is our commitment. Our member-driven board continues to develop and implement innovative, service-based initiatives to drive the evolution of our service philosophy. It's the core of what we strive for in our network design and future goals. I assure you, there will be more firsts to come for Air Elite!

Beyond my leadership efforts with the board, the passion I have for Air Elite is evident in representing our 62 FBO locations, who work diligently to maintain our high quality of service and facility standards. Through annual network-supported FBO audits, continual education of industry trends, implementation of best practices and industry innovation of services, Air Elite is committed to remain at the diamond point of customer service. Members are encouraged to benchmark the network's fundamental service philosophies to develop and implement their own service delivery, training and safety standards. All locations strive to remain vigilant in all facets of service, with the ultimate goal of solidifying our network as a global standard in exceptional and consistent FBO service.

There is a bright future ahead for Air Elite. Our FBOs are increasingly passionate about delivering reliable diamond service within their unique regions. Air Elite continues to grow globally and strategically to ensure that diamond service FBOs are located in all areas of the globe to create better network connectivity and exceed the expectations of our valued business and general aviation clients.

Whilst the industry is constantly changing, we promise to continue to provide unwavering service for your aircraft, your flight crews and your passengers. We look forward to serving you and your team when you arrive on our ramps around the globe.

Will Holroyd
Sales & Marketing Director, Harrods Aviation

Flying To Cuba Still Restricted, But Easier
by Kerry Lynch

Business aviation operators are finding travel to Cuba significantly smoother as restrictions have eased over the past year. But at the same time, industry executives caution that operators must still plan well ahead and follow the protocols closely.

“They told us this was coming months ago and the Cuban government is addressing some of the business aviation issues; however, it is not accustomed to having general aviation and it is trying to streamline the process for itself and operators,” said Cathy Self, director of compliance for Universal Weather and Aviation. “Planning ahead for this process is key.”

Cuba has come a long way over the last year in handling business aviation, agreed Suran Wijayawardana, COO of Alerion Aviation, which launched earlier this year from the merger of JFI Jets and ACP Jets.

Alerion’s predecessor companies were among the first business aviation operators to fly to Cuba after the U.S. government issued exemptions easing initial licensing requirements, with their first flights beginning in late August last year. Within the first year, Alerion and its predecessor companies have flown approximately 70 operations into and out of the island nation.

“What we encountered during August and September last year was...a lot of misinterpretation as to what the [travel] exemptions allow us to do,” Wijayawardana said. Confusion surrounded the permits required and how the handling would be accommodated, he added.

Once they received clarification, the process was pretty straightforward from the U.S. standpoint. “But the approval process and the permit process on the Cuban side in the first couple of months was hair-raising,” he said. The company, working through established flight planners, would apply for a landing permit well over a week in advance.

“We’d get landing rights maybe two hours before we were to take off from the mainland in the U.S. That was something that made us all nervous,” Wijayawardana said.

One of the occasions involved a trip booked by a major news station around the time Pope Francis was set to visit Cuba. “We had the president of the news station on board, along with a highly recognizable reporter, and we finally got landing rights an hour-and-a-half before takeoff,” the company wasn’t willing to risk taking off without permits.

“It took right up to the last minute.”

Other hurdles the company faced included currency and handling. Cuba did not accept credit cards or U.S. currency. “The gates had just opened and they weren’t equipped to do credit card processing. In the beginning, Cuba wasn’t very forward in that light,” he said. “We had to provide the flight crew with plenty of cash, which is not standard practice for us.”

Reserving hotels could be problematic since that process was not modernized, he said. “The confirmation part of it was a little unknown.” On the ground, operators had to work with Cuban representatives. “These were newer companies, so there was a little bit of confusion,” Wijayawardana said.

These issues have improved, he said, noting the permit process is a lot smoother now. “The process for handling our applications and paperwork has increased probably 200 percent to 300 percent in terms of efficiency.” And now more representatives are basing in Cuba with more international ties. “You have worldwide handlers being stationed there that can process you now like you are flying to any destination,” he said. “We don’t have to have carry cash on the airplane anymore because they can do contract fueling there. That’s a big help. The major thing that’s changed is Cuba’s ability to handle aircraft.”

John Reese, director of safety, security and standards for ExcelAire, also has noted improvements. ExcelAire has flown its first handful of trips to Cuba. “The real hurdles were with the planning phase, getting the approval and getting familiar with the [U.S.] Treasury Department’s requirements,” Reese said. “It was a lot to digest.” He noted that up to that point, “just getting overflight permits was problematic” even if the operator wasn’t landing in Cuba. Planning ahead was crucial, especially for the permits. ExcelAire prepared by attending as many seminars as possible. Reese pointed to other significant changes, including the lengthening of time aircraft can park at airports in Cuba and permission for the crew to remain in the country.

Initially, he said, “We were able to bring a client in, but we had to move the crew and equipment out. We had to reposition only to certain gateway airports.” With the changes, however, “we are able to leave equipment and crew while the client is there. That works out much better. We don’t have to move the aircraft, which is quite costly.”

Planning Ahead Still Required

One concern that remains is AOG. There have been questions about basic services there, such as the ability to bring in parts and access to licensed technicians who could work on an airplane. “There were a lot of discussions with maintenance folks about what we would do if something went wrong. Before going in we make a point from a maintenance perspective to do a rundown on an aircraft and make sure everything is where it needs to be,” Reese said. While operators do this anyway, “We give that one extra check because you know if something were to go mechanically wrong in Havana it would be extremely problematic to get it fixed.”

The company initially would reposition out of Miami, making it a short hop to Cuba. Also for the first flight, it kept a standby aircraft in case something did go wrong and the company needed to pick up the client.

“The lack of AOG maintenance in Cuba was the biggest concern. Even if you had the parts, you didn’t know whether there were licensed technicians available to install the parts. You had to make sure before departure that everything on the airplane was as optimal as it could be,” agreed Wijayawardana. “Right now it is still our largest concern flying in and out of there.”

However, like everything else, both Reese and Wijayawardana believe that too will get better with commercial service beginning from the U.S. to Cuba. That commercial service will improve access to other services such as maintenance availability, they both said. Also, a recent edict from the White House was anticipated to further increase maintenance availability.

While the logistics are improving, the limitations of the 12 reasons for travel to Cuba are still in place. Self said this has been one of Universal’s largest concerns in planning services for operators.

“We want to support the trips; however, we have had to stop arrangements because the passengers were not authorized travelers under the regulations and there was not enough time to get a specific license for the passenger,” he said. “We remind our customers that Cuba is still a sanctioned country and some activities, such as tourism, are prohibited.”

Travelers also must understand that “if they fly into Cuba on a commercial flight and leave on a business aviation flight, this is not well regarded by the CAA of Cuba. If passengers go in on commercial, they need to leave on commercial and vice versa,” Self added.

The process for crews to obtain visas has become “fairly easy,” she said, but warned “there have been more demands for business visas in Cuba and this has presented a challenge for the passengers” and said this required planning. Also, as for landing permits, clients must use recognized business sponsors. “The Cuban CAA checks to ensure the business sponsor is legitimate,” she said. The executives believe that commercial service will eventually lead to relaxation of the limitations on reasons for travel.

They also predict an uptick in travel to Cuba. “Given the length of time Americans weren’t able to fly to Cuba and given the draw to the island and the culture, it’s something that will be popular,” Wijayawardana said. “It’s a unique travel experience.”

“We’re pretty excited now that the commercial side has started operating there,” Reese added. “We’re seeing quotation activity picking up.”

“In our opinion, it will increase the demand,” Self agreed. “However, until the travel restrictions are eliminated, the commercial carriers will face the same scrutiny for ensuring that their customers are authorized travelers as we do.”
In a profession where you’re judged how smoothly a flight goes, BGA pilots need every tool they can access to keep their passengers happy. It’s not just flying the plane, but ordering services, making reservations, and meeting the expectations of passengers whose itineraries can change at a moment’s notice.

One tool several Air Elite locations are using to make the lives of pilots easier is Total Aviation Software’s Concierge module.

The module features a bevy of features that help both the pilot and the FBO, including a tool called the Live Board, which shows, by tail number, all the services that have been ordered along with status updates, ensuring more accuracy and timeliness. This gives Customer Service and line staff visibility into all that’s requested, staged or completed in preparation for the aircraft arrivals and departures. This provides the FBO a platform to double-check the list of services ordered by the operator. The software was designed to ensure all services for the pilot, aircraft and passengers can be professionally attended. Even better is that the FBO is able to send email confirmations when the requests are received to allow an operator to focus on the aircraft and the passengers.

The Concierge module from Total Aviation Software is also integrated with FlightBridge, FlightAware and QuickHub, ensuring maximum efficiency in booking reservations, prioritizing ramp space, and accessing customer records with preferences and payment information. It’s a game changer for any location that wants to move away from whiteboards and sticky notes.

If you haven’t checked out Total Aviation Software and the Concierge module, give it a look by visiting www.totalaviationsoftware.com. Your pilots will thank you!
Northeast Air

Northeast Air (NEA) is a company that few non-general aviation and non-business aviation Mainers are familiar with. But if you’ve ever arrived at the Portland International Jetport in a private or business aircraft, Northeast Air’s employees were probably the people who welcomed you to Maine.

In 1969 Henry A. Laughlin, Jr.—fondly known as “Sandy” in the aviation industry—founded Northeast Air. Sandy had been a Major in the Army Air Corps and commanded a squadron of B-29 Bombers in the Pacific Theater during World War II. The discipline, integrity, and courage he displayed in the Army Air Corps served him well on his return to civilian life. Over the next 30 years, Sandy built a solid business that supported not only his family, but created a livelihood for many dedicated employees. His passion and true love of aviation helped sustain him until his retirement in 1985. Today, Sandy’s son Henry has taken over the reigns, and in the last ten months has invested over $3,000,000 to bring Northeast Air’s facilities to the forefront of the aviation industry.

NEA President Henry Laughlin says the company has made this investment because first impressions of Maine matter. “The Portland Jetport is an important aviation gateway to Maine, not only for vacationers but also for major business leaders and investors who have companies here, or may be considering a location in the state of Maine,” he said. “We have to make the best first impression that we can. That’s why we are making this investment and why the owners of private jets and aircraft enjoy coming to Northeast Air.”

On July 29, 2016, after more than a year of planning and six months of construction, Northeast Air celebrated the grand opening of their new general aviation terminal. More than 200 family, friends, customers, and vendors experienced the new general aviation terminal building, celebrating a new phase in Northeast Air’s history.

The new Northeast Air general aviation terminal includes a modern, elegant 3,500 square foot semi-circular open space lobby with comfortable seating and stunning views of the nearly 1,000,000 square foot ramp. In addition to full concierge service for customers, pilots can enjoy a spacious lounge with snooze rooms, a flight planning station, and a fitness room with shower. NEA has also included a 12 seat conference room available by reservation. Outside, the company has added 35 new short term parking spaces in addition to free long-term parking for customers.

Staffed by a team of highly qualified aviation experts, NEA provides maintenance, fueling, and deicing services to the entire jetport. For private aviation customers, Northeast Air offers tie downs, 50,000 square feet of hangar space, full concierge service, and on-site car rental service. Northeast Air is also a certified Pilatus Service Center, specializing in the flagship PC-12 turboprop business aircraft.

From its humble beginnings in a Quonset hut next to the old airfield terminal, to its current incarnation in its modern facility, Northeast Air has always valued an exceptional customer experience by building trust and providing excellent value to its customers.
Pazos Kicks Off New FBO’s Inaugural Calendar With A Sonic Boom!

PAZOS, the premier FBO services operator and retail fuel provider in Puerto Rico, kicked off an action-packed calendar of activities leading up to the grand inauguration of its new state-of-the-art facilities in November. Developed to the tune of more than six million dollars, the new PAZOS FBO will be one of the most technologically advanced operation of its kind in the Caribbean.

Strategically located at Luis Muñoz Marin International Airport in San Juan, PAZOS is putting the final details on its new world-class installation, which will include the island’s first FBO with a full service U.S. Customs and Border Protection (CBP) terminal onsite, which will substantially expedite customs and immigration processing of international travelers upon arrival in San Juan.

“What began as an inspiring idea, today is a reality! This beautiful new FBO building is the culmination of the hard work and dedication of PAZOS’ extended family of employees, the loyalty from many pilots whom we have served over the years and consider them to be more than clients, our friends; the patronage of our valued customers and the unwavering support of our partners,” said Jose Maldonado, president of PAZOS FBO Services.

The new FBO will also offer pilots such convenient amenities as: luxury pilot lounge, EAPIS assistance, flight planning work stations, weather briefing, 24-hour fuel and ground handling operations, charter coordination and aircraft maintenance. Global travelers will enjoy visiting the new executive passenger lounge, gourmet deli and catering, and convenient corporate facilities with the latest telecommunications technology.

The building’s cutting-edge architecture, designed by the award-winning AIR Architects firm, features a two-story canopy for convenient passenger drop off at the main entrance, enhancing travelers experience as they quickly continue on their way to life-changing destinations, “almost without touching the ramp,” noted Maldonado, adding the new FBO features a substantial expansion of hangar and ramp space, the latter now up to 250,000 square feet.

Business travelers as well as corporate clients will find PAZOS, new FBO to be the “one stop” solution to doing business in Puerto Rico, with access to high-tech conference room areas with multi-media and video conference technology; customized meeting planning support on request, onsite gourmet catering and much more. In addition to its own concierge services, FBO clients will also enjoy AirElite “diamond level” membership benefits, including hundreds of dollars in savings at popular retail destinations.

The grand inauguration celebration began with a “sonic boom” in early October as PAZOS welcomed to its new FBO the exclusive visit of the No. 1 F-16 jet of the U.S. Air Force Thunderbirds lineup. As part of its inaugural activities, PAZOS was the leading sponsor and official fuel provider of the Puerto Rico International Air Show in San, celebrated Oct. 8-9 in San Juan.

“It was an honor to welcome ‘America’s Ambassadors in Blue’ to our new FBO building, and most importantly to be the exclusive fuel provider to the magnificent USAF Thunderbirds during their visit to Puerto Rico. This event marked the beginning of a series of activities leading to the grand inauguration of our new FBO building,” said Maldonado, noting that PAZOS, handling staff also provided customer service support for the Thunderbirds staff during their Puerto Rico visit.

Following the Thunderbirds’ presentation, PAZOS welcomed the 2016 Latin American Technical Aviation Services Conference in San Juan and a special presentation at this year’s NBAA’s Business Aviation Convention & Exhibition.
